Profile

A track record of developing **full-stack projects** with efficient pipelines. Dedicated **Data Science intern** with 1 year of hands-on experience in leveraging **machine learning, deep learning**, and to solve complex business problems. Proficient in implementing innovative ideas to deliver automated solutions and meet customer requirements. Skilled in **data collection, pre-processing, analysis, and deployment**. Strong ability to improve model performance and lead teams in brainstorming. And developing creative-automated solutions. Seeking a Data Scientist role to utilize my expertise in developing full-stack data science projects and drive impactful results.

Education

Almora, India	High school <i>Arya Inter collage Deghat Almora</i>
Almora, India	Intermediate <i>Arya Inter collage Deghat Almora</i>
Meerut, India	Bachelor Of Computer Application (BCA) <i>Swami Vivekanand Subharti University</i>

Skills

Python • SQL • Pandas • NumPy • Statistics • Machine Learning • Deep Learning • Matplotlib • Seaborn • Power BI
Microsoft Excel • AWS • Mongo DB • Git-hub • Flask-API

Professional Experience

Data Scientist: Internship iNeuron Intelligence Pvt Ltd

- **Web scrapping** and data collection
- **Data visualization**
- Developing **Interactive Dashboard**.
- Data pre-processing and data wrangling.
- Finding the insights of data-by-**data analysis** using **statistical methods**.
- Preparing **HLD, LLD**, wireframe designs.
- Preparing **model architecture**.
- **Deploying** and monitoring models.

Projects

Thyroid Disease Detection

- **Objective:** Thyroid disease is one of the most common diseases with endocrine disorder in the human population today. We need to build a ML model which will be used by hospitals and help the hospital authority to predict if the patient has thyroid or not based on given patient data.
- **Tech Stack:** Python, ML algorithms, Docker, Airflow, MongoDB, Flask, Fast API, AWS, GitHub-actions, MLOps
- **Achieved** an accuracy of 99.85% using XgBoost.

Credit Card Default Prediction

- **Objective:** Financial threats are displaying a trend about the credit risk of commercial banks as the incredible improvement in the financial industry has arisen. In this way, one of the biggest threats faces by commercial banks is the risk prediction of credit clients. The goal is to predict the probability of credit default based on credit card owner's characteristics and payment history.
- **Tech Stack:** Python, ML algorithms, Docker, Airflow, MongoDB, Flask, Fast API, AWS, GitHub-actions, MLOps.
- **Achieved** an accuracy of 99.85% using Random Forest.

Aps-fault-detection

- **Objective:** The problem is to reduce the cost due to unnecessary repairs. So, it is required to minimize the false predictions.
- **Tech Stack:** Python, ML algorithms, Docker, Airflow, MongoDB, Flask, Fast API, AWS, GitHub-actions, MLOps
- **Achieved** an accuracy of 99.85% using XgBoost Classifier at a cost of 2950.
